

**METHOD AND APPARATUS FOR ADAPTING SETTINGS
OF WIRELESS COMMUNICATION DEVICES IN ACCORDANCE
WITH USER PROXIMITY**

5

ABSTRACT OF THE DISCLOSURE

Improved approaches for adapting settings of wireless communication
10 devices based on estimated proximity to respective users. In accordance
with one aspect, one or more settings of a wireless communication device
can be automatically altered in accordance with motion (if any) of the
wireless communication device. Consequently, settings of the wireless
communication device can be dynamically adapted based on the proximity
15 (e.g., motion) of the wireless communication device to its user.
